

VI Liceum Ogólnokształcące is a state high school located in Lublin, a city in the eastern part of Poland. The school offers comprehensive secondary education with the extension of specific subjects, depending on the class profile. Students can choose between such fields of study as Journalism, Psychology, Law and Economics as well as Ecology and Tourism. Major attention is paid to teaching foreign languages such as English, German, French and Spanish.

Our school has always intensively promoted green policy by taking part in different actions and implementing eco-friendly solutions on its premises, e.g. providing recycling bins in the corridors, installing a device measuring air quality and displaying the results of the measurements on the monitor, hydroponics (growing plants without soil). Both the students and the teachers pay attention to green issues and get involved in environmental protection not only at school but also outside it.

Apart from the green policy, our school also promotes European Community issues such as cultural diversity, gender equality, racial and religious tolerance etc. For many years it has been opened to immigrant students and currently it is attended by a number of learners from Ukraine. Besides that, both students and teachers are actively involved in voluntary work such as collecting basic commodities for the local orphanage and hospice, the homeless shelter, the animal sanctuary as well as donating blood. Students with disabilities or health problems are offered home schooling and comprehensive psychological support. In 2021 we won the School of the Year competition organized by local educational authorities, which is great evidence of us being not only environment- but also student- friendly.
